

Imidazole and Imidazoline Derivatives and Uses Thereof
Abstract of The Invention

5 This invention is directed to novel imidazole and imidazoline derivatives which are selective agonists for cloned human α_2 adrenergic receptors. This invention is also related to the use of these compounds for the treatment of any disease where modulation of the α_2 receptors may be
10 useful. The invention further provides for a pharmaceutical composition comprising a therapeutically effective amount of the above-defined compounds and a pharmaceutically acceptable carrier.
